

Industry Specific ERIP Portals are Available for:

- Schools K-12
- Higher Education
- Daycare Centers
- Financial Institutions
- Long-term Healthcare
- Hospitals
- Shopping Malls
- Government Facilities
- Office Complexes
- Retail Stores
- Convenience Stores
- Churches
- Restaurants
- Apartment Complexes

Better Plans In Less Time

Today, emergency planners are tasked with developing comprehensive plans that fall well outside their areas of expertise. The ERIP system gives planners the training, resources and infrastructure they need to develop the most comprehensive and intuitive emergency response plans possible.

Consistency

ERIP provides a common format and guidelines to help ensure all facility planners develop plans that meet specific requirements. As new recommendations and best practices are developed, these changes can be instantly updated for all users.

Time Savings

Comprehensive, all-hazards plans can be developed in about 4 hours using intuitive formats and instant access to planning resources.

All-Hazards Plans

The development of NIMS compliant mitigation, response and recovery plans that utilize the Incident Command System helps to ensure the fastest and most appropriate response to any critical incident. ERIP content is based on generally accepted best practices and is fully editable to ensure plans properly account for local hazards and resources. An interactive table of contents serves as a road map as plans are developed in a secure online environment.

Key Aspects of ERIP Plans:

- National Incident Management System (NIMS) compliant
- Utilize the Incident Command System methodology
- Complete public health and pandemic plans
- Building-level response & recovery plans
- Easy-to-use, intuitive software
- Easy to maintain and update
- Customized to each building
- Multiple control and access levels
